Company Profile

GAD GROUP LIMITED is an established Retail and Service Provider of Hotel Lock Systems, Closed Circuit Television (CCTV), Access Controls, Video Doorbell, GSM Panic Alarm Systems, Computers and Electronics in and around the country since 2007. Other accessories we provide include cartridges, toners, hard drives and flash drives. At the moment, we are currently across three regions of the country, Greater Accra, Western and Eastern Region. We pride ourselves in providing excellent services and diligently serving our customers. We are not only keen in growing our customer base but ensure that we establish unique individual relationships with each and every client.

Vision

To be the number one IT and Security Systems sales outlet and service provider not only across Ghana, but also in the West African region. In order to do this, we are currently spreading our wings in other areas of Ghana. We understand the importance of quality, therefore, we have a team of highly skilled, qualified and competent professionals who have complete knowledge and confidence in what they do. Our team is constantly improving their skill set and knowledge base, in line with technology advances and new demands that arise daily. As such, you are assured of quality output from our team members.

What We Offer

We offer professional IT services and support services, ranging from software to hardware solutions and network installation as well as troubleshooting. We understand that every client's need is different, as such not only do we offer all these services with high professional standards, we tailor each solution to meet our client's specific needs. Our clientele include governmental institutions, corporations and individuals.

AT GAD GROUP LIMITED, WE MAKE SURE TO FIND THE BEST SOLUTIONS FOR YOU AND YOUR ORGANIZATION!

OUR SERVICES

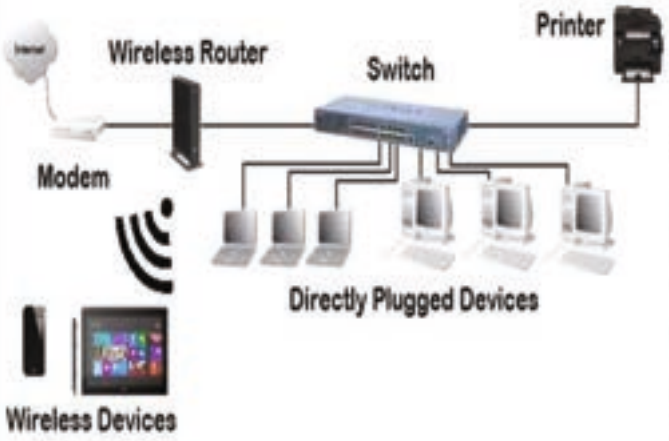
WIMAX CONFIGURATION & INSTALLATION

WiMAX is a revolutionary technology for wireless broadband voice, data and video transfer at large distances. Based on the IEEE 802.16 standard, it received the name WiMAX by the WiMAX Forum in 2001, when it was found to provide communication, support and interoperability of the standard. The technology is suitable for building high-speed network, which is used to provide various services such as internet access, fixed telephone service, voice and data transfer, connection between offices, fax, urban and interurban virtual private networks, video information, multimedia applications, etc.

The WiMAX services replace the traditional services provided through LAN, cable modems, optics or DSL technology.

GAD has developed and trained its Technicians to help you achieved this in the best possible for you.

OFFICE IT SETUP AND SUPPORT



Setting up a new office or moving from one office to another is a painstaking exercise. In absence of an IT department it even becomes more cumbersome to handle. We at GAD understand the problem and hence offer a unique service for setting up your workplace. Whether it's a new setup or you want to shift your office, once you engage us, we take full responsibility and charge of all IT related details required in the new office including supply and installation.

With a project manager associated to your project you can always be in control and have all IT related work addressed through one channel instead of engaging multiple vendors. We also offer a zero down time migration facility in which your staff can move out of the old office and move into the new one without having loss of work.

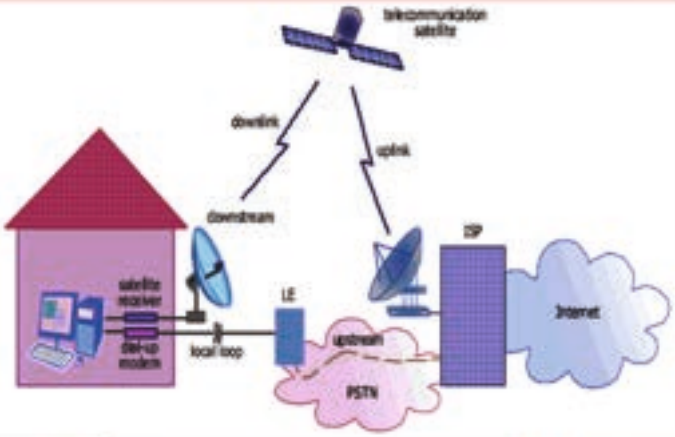
With us, you can enjoy the peace of mind as we manage your IT setups. We manage and deliver requirements as a turnkey solution right from Cabling Works, Computers, Server and Printers, Access Control Systems, CCTV, IP Phone Systems and any other special needs that you may have.

INTERNET DEPLOYMENT AND MANAGEMENT

Internet-based client management (sometimes referred to as IBCM) lets you manage System Center Configuration Manager clients when they are not connected to your company network but have a standard Internet connection. This arrangement has several advantages that include the reduced costs of not having to run virtual private networks (VPNs) and being able to deploy software updates in a timelier manner.

Because of the higher security requirements of managing client computers on a public network, Internet-based client management requires that clients and the site system servers that the clients connect to use PKI certificates. This ensures that an independent authority authenticates connections, and that using Secure Sockets Layer (SSL) encrypts data to and from these site systems.

We at GAD will take up a link from any TELCO to deploy and manage for you without any hustle. And with our Cisco firewalls in place security will never be a problem.



CCTV CLOUD RECORDING SERVICES

Are you a client that would like your security DVR/NVR to be offsite, so that any security camera footage cannot be destroyed or stolen should anything happen? Then you have come to the right place, at GAD our CCTV Cloud Storage Provides Security and Peace of Mind.

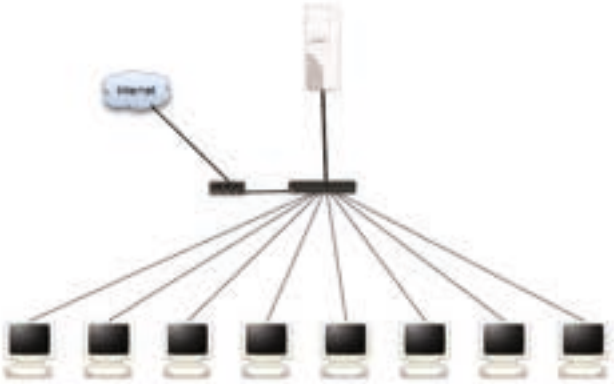
OUR (UNLIMITED CCTV CLOUD STORAGE) SERVICES INCLUDE

Vital offsite managed video data backup. Saving, storing and retrieving of all your vital video data. Video data transferred securely over the Internet. Unlimited CCTV cloud storage. Video data saved securely and indefinitely. A recovery request system, which allows you to have easy access of your data. A history log of all retrieved data requests.

HOW CCTV SERVICES' CLOUD STORAGE BENEFITS OUR CLIENTS

Our clients can have access to their security camera cloud storage from as far back as (3 – 4 Months). Storage services also include our exclusive System Health Monitoring. Our proprietary Virtual Video Vault services sends both our client and our service team emails and text message alerts in the event any recording device, network, or cameras experience issues. All storage space, set up, programming, monitoring and maintenance of your account is managed by GAD Group Limited for a small monthly fee.

OUR SERVICES



IT INFRASTRUCTURE DESIGN

Computers are the backbone of modern business, and they, in turn, depend on a solid foundation made by a combination of hardware, software, and services. ... GAD plans systems design projects in a way that aims to reduce maintenance costs and downtime when changes are necessary.

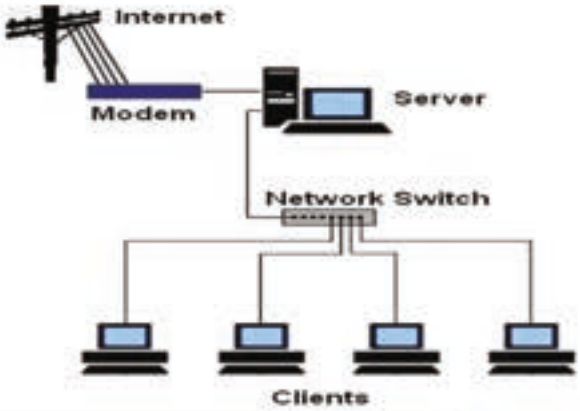
We have a team of experts to design, implement and manage different complexity of LAN, WAN, system operations guidelines and security policies for you.We listen to our clients' business and IT requirements before recommending a holistic solution that is optimized to meet current requirements as well as to provide sufficient flexibility to allow for future expansion

NETWORKING INSTALLATION & REPAIRS

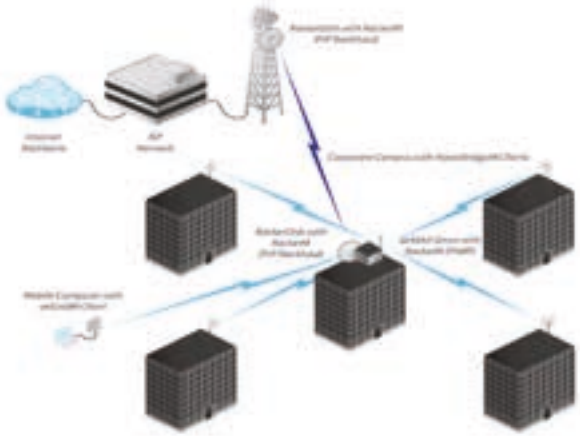
GAD provides networking services for home and business. Whether you need a simple network for your home to share printers and Internet access or a robust, fault-tolerant and secure setup for your business, we can help.

Businesses of all sizes are becoming more dependent on information technology and the Internet. Data storage, employee collaboration, communication, IT management and file/printer sharing are best accommodated through computer network services. If you don't have a dedicated IT department, outsourcing computer network services will protect your digital assets and productivity.

Whether you are looking for expert assistance in computer networking installation, business IT network support or computer network security.



RADIO POINT TO POINT INSTALLATION & MAINTENANCE



GAD has developed extensive experience over a long period of time for the installation of profitable network systems through the reduction of rollout time for a customer's network. Additional professional services available from GAD include implementation of site infrastructures (towers, cabin, civil works, etc....). Antenna rigging, radio installation and commission and integration services. We offer the flexibility to either use internal professional installation teams or alternatively provide training and support to local subcontractors. GAD supervisory engineers are available to co-ordinate/supervise local personnel during survey and I&C activities on the customer's sites.

Moreover, in order to obtain the most effective and efficient operational performance, We have developed the capability to structure and manage preventive and corrective maintenance programs.

In support of the maintenance programs, GAD has the ability to provide hands-on technical expertise that will ensure all project objectives are delivered within the required timeframe

CISCO NETWORKING DESIGN & INSTALLATION

Effective network design implementation requires a solid understanding of the current state of recommended network models and their ability to scale as the network grows. The hierarchical network model and the Cisco Enterprise Architecture are models to consider when designing a network.

Businesses increasingly rely on their network infrastructure to provide mission-critical services. As businesses grow and evolve, they hire more employees, open branch offices, and expand into global markets. These changes directly affect the requirements of a network. A large business environment with many users, locations, and systems is referred to as an enterprise. The network that is used to support the business enterprise is called an enterprise network, which GAD can assist your Firm with.
